

Image 1 - Gradio batch UI (idle state) The app_gradio.py interface is live with the "CSV Processing Control Board" tab, a file upload zone, urgency alert threshold slider (set to 8/10), and the "Initialize Batch Engine Run" button ready to go.

Image 2 — Batch run complete After uploading test12.csv (13.5 KB), the engine processed 101 tickets successfully. The status log confirms: *"Databases committed, Discord channels alerted where matching rules applied."* The real-time metrics table shows tickets TKT-101 through TKT-110 with customer names and ticket text — a good spread of severity levels (critical payment errors, 403s, feature requests, positive feedback).

Image 3 — Detected Tone column added Scrolling right reveals a "Detected Tone" column (NEGATIVE / NEUTRAL / POSITIVE) sitting before the scores. The ticket text preview is also visible in truncated form, making it easy to cross-reference what the AI decided against what the customer actually wrote.

Image 4 — AI scores now visible in the results table The metrics array now shows four columns: Urgency Rating, Churn Index, AI Logic Assessment, and Action Status. The Action Status column uses red/green dot indicators — red "Dispatched" for tickets that hit the Discord threshold (urgency 10, churn 10 and 10/9), green "Logged Locally" for everything below.

Image 5 — Discord alert fired The Discord #ticket-alerts channel received a High Polarity Escalation Alert for **TKT-305 / Bharathi Selvaraj** — sentiment ANGRY, urgency 10/10, churn risk 10/10. The AI logic reason correctly identified a critical production outage with a 30-minute cancellation threat, and the original message is quoted in full.

The screenshot shows a Discord interface for a server named 'Triage Testing Ground'. The left sidebar contains navigation options: 'Events', 'Server Boosts', 'Text Channels' (with a sub-list showing '# general' and '# ticket-alerts'), and 'Voice Channels' (with a sub-list showing 'General'). The main window displays the '# ticket-alerts' channel. A message from 'TicketSense Core Bot' (labeled 'APP') is shown, dated 'June 9, 2026' at '1:01 PM'. The message content is as follows:

HIGH POLARITY ESCALATION ALERT

Ticket ID	Customer	Sentiment
TKT-305	Bharathi Selvaraj	ANGRY

Urgency	Churn Risk
🔥 10/10	⚠️ 10/10

Alert Trigger
Urgency Level Triggered (10/10)

AI Logic Reason
The customer is experiencing a critical production outage with significant financial losses, has not received a response to a high-priority ticket, and is threatening immediate cancellation and migration to a competitor if not resolved within 30 minutes.

Original Message
This is absolutely unacceptable. Our production payment gateway has been throwing 500 errors for the last 4 hours, and our customers are furious. We are losing thousands of rupees every hour. I opened a high-priority ticket this morning and haven't received a single response. If this isn't resolved completely within the next 30 minutes, cancel our enterprise subscription immediately. We will migrate our entire infrastructure to a competitor who actually values uptime. Fix this now!

At the bottom of the screenshot, another message from 'TicketSense Tracker' (labeled 'APP') is partially visible, dated '2:24 PM'.
